How to add the eWOF system to your home screen (IOS/Safari)

This guide will walk you through on how you can add a shortcut for the Itsallauto eWOF system to your home screen on your mobile device. Doing this will allow you to access the web application straight from your home screen, rather than having to search around in the browser to get to it.

01 IOS/Safari: Press the "share" button

Make sure you are on the inspections.itsallauto.com web app.
If you are on an IOS device and using Safari, press the share icon that should be in the bottom center of the screen.

02 IOS/Safari: Press the "Add to Home Screen" option

After clicking the share icon, this menu should pop up. Press the Add to Home Screen option. If you cannot find that option, try scrolling down in that menu.

03 IOS/Safari: (Optional) Change the name of the application

A prompt to add the web app to your home screen should pop up. From here, you can optionally change the name of the application. In this example, we will change it to Itsallauto eWOF .

04 IOS/Safari: press "Add"

When you are satisfied with the name of the shortcut, press the "Add" button

05 IOS/Safari:

After pressing "add", you should be taken back to your home screen, where you can see that an icon has been added.
